

Data Sheet

Product Description

GreaseShot is an automatic biological drain dosing system designed to keep commercial foodservice drains clear of fats, oils, grease (FOG), and starches.

Key Features & Benefits

- Environmentally Friendly
- No disposable packaging
- Reusable container
- Compact volume packaging
- No battery replacements required
- No printed circuit board (PCB)
- No peristaltic pump

Highly Efficient Dosing

Unlike traditional wall-mounted systems or pumps that typically dose once per day, GreaseShot delivers a micro-dose every six seconds—providing consistent, all-day protection. This ensures the system remains effective, even when drains are exposed to cleaning chemicals, hot water, and other disruptive agents.

Unmatched Reliability

With minimal moving parts and no batteries, PCBs, or pumps, GreaseShot is built for durability and long-term cost efficiency. Its simplified design significantly reduces the risk of mechanical failure.

Superior Bio-Remediation

GreaseShot features a powerful, high-bacteria-count formulation (over a billion per dose) specifically engineered to break down fats, oils, grease, and starch. It remains effective across varying pH levels and prevents the reformation or solidification of waste downstream.

Quick and Easy Installation

Installation is straightforward:

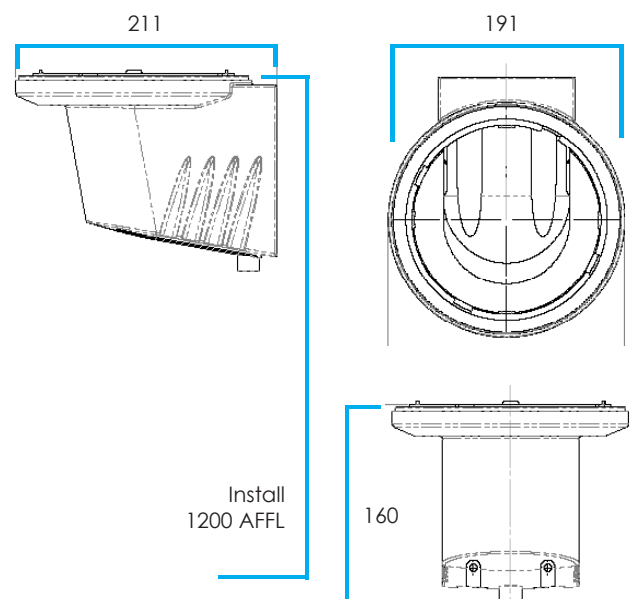

Mount the system at 1200mm above finished floor level (AFFL)

Secure with four screws

- Insert the drip feed into the drain
- Fill the container—done!

GreaseShot is easy to install, just four screws, insert the "drip feed" into the drain, fill the bottle & you're all set. Install GreaseShot 1200mm AFFL, above the height of the work table.
