

GreaseShot is an automatic biological drain system designed to keep commercial foodservice drains clear of FOGS (*Fats, Oils Grease & Starches*).

Environmentally Friendly

- No disposable packaging
- Compact volume packaging
- Reusable container
- No pumps.

Highly Efficient Dosing

Unlike traditional wall mounted systems or pumps that typically dose once a day, GreaseShot delivers a 220ml every day, ensuring the drains remain clear all day long, even when pH balances change.

Unmatched Reliability

With minimal moving parts, no Pumps, GreaseShot is built for durability & long-term operational cost efficiency, designed to reduce mechanical failure, reducing ongoing operational maintenance.

Superior Bioremediation

Powerful, natural high-count formulation (over a billion), engineered to break down FOGS, effective across varying pH levels, reducing reformation of FOGS downstream.

Quick & Easy Installation

- GreaseShot fits onto the wall 1200mm AFFL
- Level, drill & fix with the four screws provided
- Drill an 8mm hole into the top of the waste pipe and seal
- Fill the bottle provided with the bioremediation and water mix-Done
- For full fixing details refer to the official installation instructions
